Is also disease-resistant. Dark green foliage.

## Archias' Missouri 47

Main Crop Yellow—110-115 days

Also developed by Mo. Agricultural College. Strong and vigorous, medium height, much the same as Mo. No. 8 except about 10 days earlier. Ranked first in 48 tests in Eastern Kansas in 1939-40 trials and is a leader in many other trials. In official tests in Missouri over a 3-year period, out-yielded Reid's Yellow 48 per cent.

## Missouri 148

120-125 days

Seed supply of this new variety very limited. Order at once before we are sold out. Missouri 148 parentage is similar to Missouri 8; however, in breeding this new hybrid the undesirable features of Missouri 8 have been removed, retaining the good features and many of the good features of U. S. 13 have been added.

A very tall hybrid with deep green foliage. Ears borne high, are long and somewhat tapering. Kernels medium yellow with medium indentation. Resistant to lodging under most conditions. Best adapted to the area south of the Missouri river. No. 148 was near the top in many of the state yield tests in 1942.

## Archias' "Special Strain"

U. S. 13

Main Crop Yellow—120-125 days

A grand hybrid in every way and very popular throughout the corn belt. Single ear tendency. Deep kernels high in feeding value. Resistant to drought and chinch bug. Shucks easily. Stands up well. The first hybrid to ever win the Grand Championship at the International in Chicago, in both 10-ear yellow and shelled corn class.

Its rapid vigorous growth and its fine dark green color. All these are found in U. S. 13. It comes as near to being one ideal corn as any Hybrid.

# HYBRID SEED CORN

## FUNK'S "G" HYBRIDS *Home Grown*

### FUNK'S HYBRID G-94

Medium to full season in maturity, this single-eared yellow hybrid has enjoyed an outstanding record through Northern and Central Missouri, and Kansas. Has the highest 2-year record in Kansas test—69.29 bushels in the Northwestern section. Is in the top two in Northern Missouri 2-year averages and in 1940 placed in the top group in both Central and Northern Missouri.

Leafy, dark green; grows to medium height, and stands up exceptionally well, surviving chinch bug and root worm attacks. Resistant to grasshoppers, heat, drought and Stewart's Disease. Its cold resistance allows it to be planted early, giving time to mature the large single ears of exceptional grain quality.

### FUNK'S G-80

Full season in maturity (about one week later than G-94), a single eared yellow variety.

G-80 is a new, rapid growing, high yielding hybrid that has unusual stalk qualities enabling it to stand up even when storms level other corns. This hybrid has demonstrated its ability to withstand wind, drought, chinch bugs, Stewart's Disease and ear worms. It will deliver a rich golden harvest of excellent feeding quality, good deep kernel corn on soils of varying fertility levels. A winner in state yield tests and private trials, it is the answer to many of the corn growers' problems in Central and South Missouri and Kansas.

### FUNK'S WHITE HYBRID G-527W

Medium to full season in the northern half of Kansas and Missouri, and medium for southern half

of these states and Arkansas and Oklahoma.

A rapid-growing, new white development which has yielded right up with yellow hybrids throughout our territory. Single ears of excellent milling quality, produced on good strong stalks. We have never been able to produce enough of this white seed to supply demand. Early orders are recommended.

### FUNK'S HYBRID G-53

Early in maturity, single eared yellow variety. Is suited for late planting over Kansas and Missouri. Best suited to good fertility, it also gives a good account of itself on average fields.

A favorite with feeders, G-53 has a dimple dent and is the softest corn we produce with high marketable and feeding value. Medium-height corn bears a single ear, medium low on the stalk. Stands up and holds the ear on the stalk and picks easily. Chinch bug, root-worm, cold, heat and drought resistant.

### FUNK'S HYBRID G-169

Early maturity, single eared. Is recommended for northern Missouri and Kansas.

G-169 is a new, single eared yellow Hybrid with the ears carried at medium height, convenient for hand or mechanical picking. Superior stalk quality and excellent root system enable this Hybrid to stand up when less sturdy selections go down. G-169 produces a fine looking corn of excellent feeding quality.

When Zotox is applied in the Minimum Solution it kills Crab Grass without destroying permanent lawn grasses.
